**Description**

Cloning Enhancer removes background plasmid DNA and PCR residue, eliminating the need for PCR insert purification prior to cloning. Cloning Enhancer-treated PCR samples yield significantly more recombinant clones. Since treatment with Cloning Enhancer occurs in the same tube as the PCR reaction, it is less likely to result in UV damage or nicking. Avoiding a separate cleanup process also minimizes the risk of losing PCR products during purification.

**Package Contents**

- Cloning Enhancer

**Storage Conditions**

- Store at –20°C.

**Shelf Life**

- 1 year from date of receipt under proper storage conditions.

**Shipping Conditions**

- Dry ice (–70°C)

**Product Documents**

Documents for our products are available for download at [takarabio.com/manuals](http://takarabio.com/manuals)

**Quality Control Data**

An aliquot of this lot of Cloning Enhancer was tested using the components of the In-Fusion® HD Cloning Kit (Cat. No. 639648). Briefly, an aliquot of Cloning Enhancer was mixed with a 2.0-kb Unpurified Control Insert and incubated at 37°C for 15 min, followed by 80°C for 15 min. After Cloning Enhancer treatment, the Unpurified Control Insert was cloned into the linearized pUC19 Vector as described in the In-Fusion HD Cloning Kit User Manual. The cloning reaction was used to transform chemically competent Stellar™ Competent Cells (Cat. No. 636763) (> 5 x 108 cfu/μg). After 1 hr of growth, an aliquot of the transformed culture was plated onto an LB Amp 100/X-gal/IPTG plate. At least 500 colonies were observed for the cloning reaction.

It is certified that this product meets the above specifications, as reviewed and approved by the Quality Department.
