Catalog No. Amount Lot Number

631625 2 μg Specified on product label.

# **Description**

Linear Hygromycin Marker is a short ds DNA fragment consisting of the hygromycin resistance gene regulated by the SV40 promoter and ending with the SV40 polyadenylation signal. The 2.1-kb marker is compatible with any expression vector (including Tet System vectors) for generating stable transfectants using CalPhos<sup>TM</sup> transfection reagent or a liposome-mediated transfection protocol. The optimal ratio of marker DNA to expression vector DNA is 1:10–1:20 using CalPhos transfection reagent or a liposome-mediated transfection method.

## **Package Contents**

• 40 µl Linear Hygromycin Marker (50 ng/µl)

### **Storage Conditions**

• Store at -20°C.

### **Expiration Date**

• Specified on product label.

#### Concentration

50 ng/µl

# **Shipping Conditions**

Dry ice

#### **Product Documents**

Documents for our products are available for download at takarabio.com/manuals

# **Quality Control Data**

- Digestion with HindIII and XbaI restriction enzymes produced fragments of 1.05, 0.6 & 0.45 kb.
- As a functional test, HEK 293 cells were transfected with 200 ng of Linear Hygromycin Marker using a liposome-mediated transfection method. After 5 hr at 37°C, the transfection solution was removed and cells were given fresh media. 48 hr later, cells were plated in two 10-cm plates. 48 hr after plating, media containing hygromycin was added to the plates. After 2–3 weeks, a total of >20 clones were identified.

It is certified that this product meets the above specifications, as reviewed and approved by the Quality Department.
