## PRODUCT: Great EscAPe™ SEAP Chemiluminescence Kit 2.0

CATALOG No.	AMOUNT	DESCRIPTION
631736	50 rxns	The Great EscAPe SEAP Chemiluminescence Kit 2.0 is a complete system for the detection of secreted alkaline phosphatase (SEAP) activity in the growth media from mammalian cells expressing this enzyme. The kit contains reagents necessary for the chemiluminescent detection of SEAP activity using a 96-well plate luminometer. The assay can also be performed in single tubes and measured in a tube luminometer. It allows you to monitor promoter activity over time, because samples of the cell media can be taken repeatedly and tested without lysing cells.
