Description

The Adeno-X CMV Vector Set (with ZsGreen1) is supplied with the Adeno-X Adenoviral System 3 (CMV, Green) [Cat. No. 632267], which provides a constitutive expression system in an adenoviral vector format. pAdenoX-ZsGreen1 is a prelinearized, adenoviral vector that is ready for the insertion of your gene of interest via In-Fusion® HD PCR Cloning technology. Simply PCR-amplify your gene and combine it with pAdenoX-ZsGreen1 in an In-Fusion HD Cloning reaction. In-Fusion HD Cloning is fast, simple, precise, and efficient, making Adeno-X Adenoviral System 3 the most advanced, commercially-available, adenoviral gene delivery tool. The vector also constitutively expresses the fluorescent protein ZsGreen1 from the E3 region of the adenoviral genome, allowing you to visualize infected cells during rescue, amplification, and target cell infection.

Functional Testing

The Adeno-X Adenoviral System 3 (CMV, green) was tested using the control fragment (*lacZ*) according to the protocol described in the Adeno-X Adenoviral System 3 User Manual. Chemically competent Stellar *E. coli* cells were transformed with 1.5 μ l of the In-Fusion reaction mixture. After 60 min at 37°C in SOC medium, the cells were plated on agar containing 100 μ g/ml ampicillin. Transformants were grown at 37°C for 24–30 hrs. PCR colony screening with the Adeno-X Screening Primer Mix revealed that >50% of the resultant colonies contained recombinant adenoviral DNA.

It is certified that this product meets the above specifications, as reviewed and approved by the Quality Department.
