PRODUCT: pRetroQ-AcGFP1-N1 Vector

CATALOG No.
632505

AMOUNT
20 µg

DESCRIPTION

The pRetroQ-AcGFP1-N1 vector is a high titer, self-inactivating retroviral expression vector that is optimized to eliminate promoter interference from the upstream LTR in the integrated provirus. This vector expresses a green fluorescent protein (GFP) from *Aequorea coerulea*. pRetroQ-AcGFP1-N1 allows cloning of genes into the multiple cloning site (MCS) upstream of the AcGFP1 coding sequence, which are subsequently expressed as fusions to the N-terminus of the AcGFP1 protein. This vector allows the expression of fluorescent fusion proteins in difficult-to-transfect cells. It also contains a puromycin selection marker for selection of stable integrants. The unmodified vector will express AcGFP1 protein and may be used to produce marker virus to optimize infection protocols.
