Description

pIRES2 DsRed-Express2 is a eukaryotic expression vector that encodes DsRed-Express2, a variant of *Discosoma* sp. red fluorescent protein. pIRES2 DsRed-Express2 is a bicistronic expression vector which contains the internal ribosome entry site (IRES) of the encephalomyocarditis virus (ECMV) between the MCS and red fluorescent protein DsRed-Express2 coding region. This permits both the gene of interest (cloned into the MCS) and the DsRed-Express2 gene to be translated from a single bicistronic mRNA. pIRES2 DsRed-Express2 is designed for the efficient selection of transfected mammalian cells expressing DsRed-Express2 and the protein of interest by flow cytometry.
