PLASMID SIZE: 7.6 kb**CLONING SITES:** Apal, BamHI, BstBI, EcoRI, NheI, Sall, XhoI**ANTIBIOTIC RESISTANCE**Ampicillin (100 µg/ml, for propagation in *E. coli*)**DESCRIPTION**

The **pRetroQ-mCherry-N1 Vector** is a high-titer, self-inactivating retroviral expression vector designed to eliminate promoter interference from the upstream LTR in the integrated provirus. The vector encodes *mCherry*; a bright red fluorescent protein tag that was derived from a monomeric mutant of DsRed (mRFP1) by site-directed mutagenesis (1). Inserting a cDNA in the MCS upstream of the mCherry coding sequence joins your protein of interest to the N-terminus of the tag, and allows the fusion protein to be tracked and studied in transduced cells. To package the vector into high-titer, replication-incompetent retrovirus, we recommend using the **Retro-X™ Universal Packaging System** (Cat. No. 631530).
