Description

The SMARTer Mouse TCR a/b Profiling Kit Components are part of the SMARTer Mouse TCR a/b Profiling Kit, which enables users to analyze T-cell receptor (TCR) diversity from total RNA samples or whole cells. The full kit is designed to work with a range of RNA input amounts depending on the sample type, and has been shown to generate high-quality libraries from as little as 10 ng to 500 ng of total RNA obtained from spleen, thymus, PBMCs, or from 1,000 to 10,000 purified T cells. As the name suggests, the kit can be used to generate data for both alpha- and beta-chain diversity, either in the same experiment or separately.

The full kit leverages SMART® technology and employs a 5' RACE-like approach to capture complete V(D)J variable regions of TCR transcripts. Included in the full kit are primers that incorporate Illumina®-specific adaptor sequences during cDNA amplification. The protocol generates indexed libraries that are ready for sequencing on Illumina platforms.

Quality Control Data

A sample kit from each lot was tested as follows: 10 ng of Control RNA (mouse spleen total RNA) was subjected to first-strand cDNA synthesis as described in the SMARTer Mouse TCR a/b Profiling Kit User Manual. The first-strand cDNA was then used as a template for 21 cycles of PCR. 1 µl of the resulting double-stranded cDNA was amplified by nested PCR for 20 additional cycles. The final sequencing library was purified with an Agencourt AMPure XP Kit (Beckman Coulter, Part No. A63880 or A63881), and resuspended in 17 µl of Elution Buffer. 1 µl of the sequencing library was analyzed with an Agilent 2100 Bioanalyzer and an Agilent DNA 1000 Kit (Agilent, Part No. 5067-1504). The analysis indicated that the TCR library profile produced a broad peak spanning 650–1100 bp, with the peak maximum at approximately 700 bp. The area containing the peak was manually integrated from 550 bp to 1,200 bp, and the concentration of this region in nmol/l (nM) was determined by the Bioanalyzer software. Final library outputs were greater than 4 nmol/l (nM).

It is certified that this product meets the above specifications, as reviewed and approved by the Quality Department.
