**QUALITY CONTROL DATA**

This lot of total RNA was analyzed by capillary electrophoresis (CE) using an Agilent 2100 Bioanalyzer. The actual electropherogram trace for this RNA is provided below. RNA concentration and purity were evaluated by UV spectrophotometry.

Both the area ratio of the 28S/18S rRNA peaks, and the proportion (relative percentage) of these two peak areas to the total area under the electropherogram provide reliable quantitative estimates of RNA integrity. For both of these criteria, this sample meets or exceeds Clontech Standards for high quality total RNA.

Peak Areas: 28S: 18.3%    18S: 13.8%    Ratio 28S/18S: 1.3    Ratio  $A_{260}/A_{280}$ : 2.1
