Quality Control Data

1. Heat stability assay

20 µl of nucleotide mix containing 10 mM each nucleotide was subjected to 20 cycles of heating/cooling (95°C for 30 sec, 66°C for 30 sec, 72°C for 30 sec). Two standard 50-µl PCR reactions were performed using either 1 µl of the precycled mix or 1 µl of fresh Advantage UltraPure PCR Nucleotide Mix. Equal volumes of PCR product from the reactions were run for comparison on an agarose/EtBr gel. A single, specific band was observed for each sample. Equivalent yields of PCR product were also observed.

2. Nuclease assay

100 nmol of each Advantage UltraPure dNTP was mixed with plasmid DNA and incubated at 37°C for 16 hours. No degradation was detected.

It is certified that this product meets the above specifications, as reviewed and approved by the Quality Department.
