Description

In-Fusion HD EcoDry Cloning Kits are designed for fast, directional cloning of one or more fragments of DNA into any vector. The cornerstone of In-Fusion Cloning technology is Takara Bio's proprietary In-Fusion Enzyme, which fuses DNA fragments, e.g., PCR-generated sequences and linearized vectors, efficiently and precisely by recognizing a 15 bp overlap at their ends. This 15 bp overlap can be engineered by designing primers for amplification of the desired sequences. EcoDry Kits provide the In-Fusion HD enzyme in a convenient, lyophilized format that is stable at room temperature. The EcoDry format simplifies reaction set-up, and reduces variability between reactions. In-Fusion HD Kits offer high cloning efficiency, especially for longer fragments, short oligonucleotides, and multiple fragments.

Quality Control Data

A sample kit from this lot of In-Fusion HD EcoDry Cloning Kits was used to clone 80 ng of 2 kb Control Insert into linearized pUC19 (50 ng) as described in the User Manual, using an incubation time of 15 min at 37°C, followed by 15 min at 50°C. A 2.5 µl aliquot of the cloning reaction was used to transform 50 µl of Stellar™ Competent Cells (transformation efficiency >5 x 10⁸ cfu/µg). After 1 hr of growth in 450 µl of SOC medium, 50 µl of the transformation culture was plated onto an LB Amp 100/X-gal/IPTG plate. At least 500 white colonies were observed for the cloning reaction.

It is certified that this product meets the above specifications, as reviewed and approved by the Quality Department.
