Quality Control Data

All primers were PAGE-purified and verified by ESI analysis.

All primers were functionally tested with 200 pg of 200 bp sheared human genomic DNA using the ThruPLEX DNA-Seq Kit to produce indexed libraries. The libraries were pooled, purified, quantified, and then sequenced on the Illumina sequencing platform. The following parameters were measured for libraries prepared with indexed primers, which were required to meet the following specifications:

Test Parameters	Result (%)
qPCR end-point fluorescence (%CV)	≤20
% Coverage (%CV)	≤20
Read pairs examined (%CV)	≤20
Barcode balance as min/mean (%)	≥40

It is certified that this product meets the above specifications, as reviewed and approved by the Quality Department.
