Product Components List

Lenti-X™ Packaging Single Shots (Envelope-Free)

Catalog No. Amount 631294 16 rxns

Description

Lenti-X Packaging Single Shots (Envelope-Free) enables streamlined production of high-titer lentivirus pseudotyped with the envelope protein of choice (not included). The kit includes pre-aliquoted, lyophilized, single tubes of XfectTM Transfection Reagent premixed with an optimized formulation of Lenti-X lentiviral packaging plasmids. The provided pEmpty Vector can be used for cloning and expression of the desired envelope protein. To produce lentivirus, simply reconstitute the lyophilized packaging mix with a mixture of the desired envelope protein vector and a lentiviral transfer vector, and add it to 293T packaging cells (e.g., Lenti-X 293T Cells, Cat. No. 632180).

The Lenti-X Reporter Vector Set included in the kit contains two self-inactivating lentiviral transfer vectors encoding ZsGreen1 and firefly luciferase for use as reporters for lentiviral transduction.

NOTE: The plasmids provided in the Lenti-X Reporter Vector Set as well as the pEmpty Vector itself must be amplified in bacteria to obtain sufficient quantities for pseudovirus production using the kit.

Package Contents
