Description

Adeno-X Adenoviral System 3 (Universal, Green) provides the components necessary to place an expression cassette of your choice in an adenoviral vector format. The system provides a perfect platform for the tissue-specific expression of your gene of interest, or for the efficient delivery of shRNA or microRNA. pAdenoX-PRLS-ZsGreen1 (included in the vector set) is a prelinearized adenoviral vector that is ready for the insertion of your expression cassette via our In-Fusion® seamless cloning technology. Simply PCR-amplify the expression cassette and combine it with pAdenoX-PRLS-ZsGreen1 in an In-Fusion Cloning reaction. In-Fusion Cloning is fast, simple, precise, and efficient, making Adeno-X Adenoviral System 3 the most advanced commercially available adenoviral gene delivery tool. Adenoviral constructs created with this system will constitutively express the fluorescent protein ZsGreen1 in mammalian cells, allowing visualization of infected cells.
