

## Retro-X™ Tet-One™ Inducible Expression System

**Catalog No**  
634304

**Amount**  
Each

### Description

The Retro-X Tet-One Inducible Expression System is a tetracycline-inducible retroviral gene expression system that allows you to produce high titers of recombinant retroviruses for the purpose of establishing a tightly inducible expression system for your gene of interest in a wide variety of dividing mammalian cells. The all-in-one pRetroX-TetOne Vector expresses the Tet-On® 3G transactivator from the constitutive human PGK promoter in the forward orientation, and your gene of interest from the *P<sub>TRE3GS</sub>* promoter in the reverse orientation. In the presence of doxycycline (Dox), the Tet-On 3G transactivator specifically binds and activates high-level transcription from the inducible promoter that controls expression of your gene. This vector does not contain a selection marker. The kit also includes our Retro-X Universal Packaging System, our premium retroviral packaging system featuring the GP2-293 packaging cell line. All four commonly used envelopes are supplied on separate vectors, including VSV-G, eco, amphi and 10A1, to allow you to choose the tropism that is most appropriate for your target cells.

### Package Contents

- pRetroX-TetOneVector Set (Cat. No. 634306; not sold separately) >> [View Components](#)
- Retro-X Universal Packaging System (Cat. No. 631530) >> [View Components](#)
- Xfect™ Transfection Reagent (Cat. No. 631317) >> [View Components](#)
- Tet System Approved FBS, US-Sourced (Cat. No. 631105) >> [Search Lot # on our website to download](#)

For storage conditions, please see the Certificate of Analysis supplied with each component.

### Product Documents

Documents for Clontech® products are available for download at [www.clontech.com/manuals](http://www.clontech.com/manuals)  
The following documents apply to this product:

- Retro-X Tet-One Inducible Expression System User Manual
- Xfect Transfection Reagent Protocol-At-A-Glance
