**Description**

The SMARTer Mouse TCR a/b Profiling Kit enables users to analyze T-cell receptor (TCR) diversity from total RNA samples or whole cells. This kit is designed to work with a range of RNA input amounts (depending on the sample type), and has been shown to generate high-quality libraries from as little as 10 ng to 500 ng of total RNA obtained from spleen, thymus, PBMCs, or from 1,000 to 10,000 purified T cells. As the name suggests, the kit can be used to generate data for both alpha- and beta-chain diversity, either in the same experiment or separately.

This kit leverages SMART® technology and employs a 5’ RACE-like approach to capture complete V(D)J variable regions of TCR transcripts. Included in the kit are primers that incorporate Illumina®-specific adaptor sequences during cDNA amplification. The protocol generates indexed libraries that are ready for sequencing on Illumina platforms.
