

In-Fusion® Snap Assembly Master Mix

Catalog Nos.	Amount	Lot Number
638947	10 rxns	Specified on product label.
638948	50 rxns	Specified on product label.
638949	250 rxns	Specified on product label.

Description

In-Fusion Snap Assembly Master Mixes are designed for fast, directional cloning of one or more fragments of DNA into any vector. This proprietary master mix fuses DNA fragments (e.g., PCR-generated sequences and linearized vectors) efficiently and precisely by recognizing a 15 bp overlap at their ends. This 15 bp overlap can be engineered into the primers designed for PCR amplification of the desired sequences. In-Fusion Snap Assembly Master Mixes offer high efficiency, even for applications that can be challenging, including the cloning of long fragments, short oligonucleotides, and multiple fragments.

Package Contents

638947 (10 rxns):

- 20 µl 5X In-Fusion Snap Assembly Master Mix
- 25 µl pUC19 Control Vector, linearized (50 ng/µl)
- 50 µl 2 kb Control Insert (40 ng/µl)

638948 (50 rxns):

- 100 µl 5X In-Fusion Snap Assembly Master Mix
- 25 µl pUC19 Control Vector, linearized (50 ng/µl)
- 50 µl 2 kb Control Insert (40 ng/µl)

638949 (250 rxns):

- 500 µl 5X In-Fusion Snap Assembly Master Mix
- 25 µl pUC19 Control Vector, linearized (50 ng/µl)
- 50 µl 2 kb Control Insert (40 ng/µl)

Storage Conditions

- Store at -20°C.

Expiration Date

- Specified on product label.

Shipping Conditions

- Dry ice

In-Fusion Snap Assembly Master Mix

Product Documents

Documents for our products are available for download at takarabio.com/manuals

The following documents apply to this product:

- In-Fusion Snap Assembly User Manual
- In-Fusion Snap Assembly Multiple-Insert Cloning Protocol-At-A-Glance
- pUC19 Linearized Vector Information

Quality Control Data

A sample kit from this lot of In-Fusion Snap Assembly Master Mix was used to clone 80 ng of 2 kb Control Insert into linearized pUC19 (50 ng) as described in the User Manual, using an incubation time of 15 min at 50°C. A 2.5 µl aliquot of the cloning reaction was used to transform 50 µl of Stellar™ Competent Cells (transformation efficiency $>5 \times 10^8$ cfu/µg). After 1 hr of growth in 450 µl of SOC medium, 50 µl of the transformation culture was plated onto an LB Amp 100/X-gal/IPTG plate. At least 2,500 white colonies were observed for the cloning reaction.

It is certified that this product meets the above specifications, as reviewed and approved by the Quality Department.
