# Genomic DNA from tissue

## Protocol-at-a-glance (Rev. 13)

### NucleoSpin® Tissue

1	<b>Prepare sample</b>		Cut 25 mg into small pieces
2	<b>Pre-lyse sample</b>		180 µL T1 25 µL Proteinase K  56 °C, 1–3 h
3	<b>Lyse sample</b>		200 µL B3  70 °C, 10 min
4	<b>Adjust DNA binding conditions</b>		210 µL 96–100% ethanol
5	<b>Bind DNA</b>	  	Load all  11,000 x g, 1 min
6	<b>Wash silica membrane</b>	  1 <sup>st</sup> and 2 <sup>nd</sup> 	1 <sup>st</sup> wash      500 µL BW 2 <sup>nd</sup> wash      600 µL B5  11,000 x g, 1 min
7	<b>Dry silica membrane</b>		11,000 x g, 1 min
8	<b>Elute highly pure DNA</b>	  	100 µL BE (70 °C)  RT, 1 min  11,000 x g, 1 min

---

## 1.2 Reagents, consumables, and equipment to be supplied by user

### Reagents

- 96–100 % ethanol

### Consumables

- 1.5 mL microcentrifuge tubes for sample lysis and DNA elution
- Disposable tips

### Equipment

- Manual pipettors
- Centrifuge for microcentrifuge tubes
- Vortex mixer
- Heating-block for incubation at 70 °C
- Equipment for sample disruption and homogenization
- Personal protection equipment (lab coat, gloves, goggles)

## 1.3 About this user manual

It is strongly recommended reading the detailed protocol sections of this user manual if the **NucleoSpin® Tissue** kit is used for the first time. Experienced users, however, may refer to the Protocol-at-a-glance instead. The Protocol-at-a-glance is designed to be used only as a supplemental tool for quick referencing while performing the purification procedure.

All technical literature is available on the internet at [www.mn-net.com](http://www.mn-net.com).

Please contact Technical Service regarding information about changes of the current user manual compared to previous revisions. *Note: Buffer B3 is delivered premixed now.*

## 2 Product description

### 2.1 The basic principle

With the **NucleoSpin® Tissue** method genomic DNA can be prepared from tissue, cells (e.g., bacteria), and many other sources. Lysis is achieved by incubation of the sample material in a proteinase K/SDS solution. Appropriate conditions for DNA binding to the silica membrane in the **NucleoSpin® Tissue Columns** are achieved by the addition of chaotropic salts and ethanol to the lysate. The binding process is reversible and specific to nucleic acids. Contaminations are removed by subsequent washing with two different buffers. Pure genomic DNA is finally eluted under low ionic strength conditions in a slightly alkaline elution buffer.

### 2.2 Kit specifications

- **NucleoSpin® Tissue** is designed for the rapid, small-scale preparation of highly pure genomic DNA from any tissue, cells, bacteria, yeast, forensic samples, serum, plasma, or other body fluids. It is also suitable for preparation of DNA from human or animal blood. The purified DNA can be used directly for PCR, Southern blotting, or any kind of enzymatic reactions.
- The kit allows purification of up to 35 µg of pure genomic DNA with an  $A_{260}/A_{280}$  ratio between 1.7 and 1.9. The **NucleoSpin® Tissue Column** is capable of binding up to 60 µg of genomic DNA.
- For lysis of certain bacterial and yeast strains, additional enzymes may be necessary which are not part of this kit. See the relevant support protocol for details.

**Table 1: Kit specifications at a glance**

Parameter	NucleoSpin® Tissue
Technology	Silica-membrane technology
Format	Mini spin column
Sample material	< 25 mg tissue 10 <sup>2</sup> –10 <sup>7</sup> cultured cells
Typical yield	20–35 µg
Elution volume	60–100 µL
Preparation time	20 min/prep (excluding lysis)
Binding capacity	60 µg

- **Forensic quality product:**

**NucleoSpin® Tissue** is certified as forensic quality product. Consumables used in forensics need to be treated carefully to prevent DNA contamination. MACHEREY-NAGEL therefore has a stringently controlled production process to avoid DNA contamination of consumables. Further, MACHEREY-NAGEL uses ethylene oxide (EO) treatment to remove amplifiable DNA, which might still be introduced during the manufacturing process. MACHEREY-NAGEL products carrying the forensic quality seal, contain plastic materials that are EO treated. This means, DNA of any kind, which might still be introduced into plastic consumables during the production process, is inactivated by means of the treatment with ethylene oxide, in order to prevent the generation of accidental human profile by PCR amplification. Ethylene oxide treatment has been shown to be the method of choice to prevent DNA profiles due to DNA contamination (Shaw *et al.* 2008; Figure 1).

**Figure 1:** According to Shaw *et al.*, 2008, Comparison of the effects of sterilization techniques on subsequent DNA profiling. *Int J Legal Med* 122: 29-33.

## 2.3 Elution procedures

In addition to the standard method (recovery rate about 70–90 %), several modifications are possible to increase yield, concentration, and convenience. Use elution buffer preheated to 70 °C for one of the following procedures:

- **High yield:** Perform two elution steps with the volume indicated in the individual protocol. About 90–100 % of bound nucleic acid can be eluted.
- **High concentration:** Perform one elution step with 60 % of the volume indicated in the individual protocol. Concentration of DNA will be approximately 30 % higher than with standard elution. The yield of eluted nucleic acid will be about 80 %.
- **High yield and high concentration:** Apply half the volume of elution buffer as indicated in the individual protocol, incubate for 3 min and centrifuge. Apply a second aliquot of elution buffer, incubate and centrifuge again. Thus, about 85–100 % of bound nucleic acid is eluted in the standard elution volume at a high concentration.

- **Convenient elution:** For convenience, elution buffer of ambient temperature may be used. This will result in a somewhat lower yield (approximately 20%) compared to elution with heated elution buffer.

Elution may also be performed with Tris-EDTA-buffer (TE) of pH equal or higher than 8. This will increase DNA stability especially during long term and/or multi use storage at 4 °C or ambient temperature by inhibition of omnipresent DNases. However, EDTA interferes, depending on the final concentration, with certain downstream applications. **Note:** Elution Buffer BE (5 mM Tris/HCl, pH 8.5) provided with the kit does not contain EDTA.

For optimal performance of isolated DNA in downstream applications, we recommend eluting with the supplied elution buffer and storage, especially long term, at -20 °C. Freeze-thaw cycles will have no effect on most downstream applications. Possible exceptions are detection of trace amounts of DNA or long-range PCR (e.g., > 10 kbp). Multiple freeze-thaw cycles or storing DNA at 4 °C or room temperature may influence detection sensitivities or reaction efficiencies due to DNA shearing or adsorption to surfaces.

### 3 Storage conditions and preparation of working solutions

#### Attention:

*Buffers B3 and BW contain chaotropic salt! Wear gloves and goggles!*

CAUTION: Buffers B3 and BW contain guanidine hydrochloride which can form highly reactive compounds when combined with bleach (sodium hypochlorite). DO NOT add bleach or acidic solutions directly to the sample-preparation waste.

- All kit components can be stored at room temperature (18–25 °C) and are stable for at least one year.
- During storage, especially at low temperatures, a white precipitate may form in Buffer T1 or B3. Such precipitates can be easily dissolved by incubating the bottle at 50–70 °C before use.

Before starting any **NucleoSpin® Tissue** protocol, prepare the following:

- **Wash Buffer B5:** Add the indicated volume of ethanol (96–100%) to **Wash Buffer B5 Concentrate**. Mark the label of the bottle to indicate that ethanol was added. Wash Buffer B5 can be stored at room temperature (18–25 °C) for at least one year.
- **Proteinase K:** Add the indicated volume of Proteinase Buffer PB to dissolve lyophilized **Proteinase K**. Proteinase K solution is stable at -20 °C for at least 6 months.

NucleoSpin® Tissue			
REF	10 preps 740952.10	50 preps 740952.50	250 preps 740952.250
Wash Buffer B5 (Concentrate)	4 mL Add 16 mL ethanol	2 x 7 mL Add 28 mL ethanol to each bottle	2 x 40 mL Add 160 mL ethanol to each bottle
Proteinase K	6 mg Add 260 µL Proteinase Buffer	30 mg Add 1.35 mL Proteinase Buffer	2 x 75 mg Add 3.35 mL Proteinase Buffer to each vial

## 4 Safety instructions – risk and safety phrases

The following components of the **NucleoSpin® Tissue** kits contain hazardous contents.  
*Wear gloves and goggles and follow the safety instructions given in this section.*

### 4.1 Risk and safety phrases

Component	Hazard contents	Hazard symbol	Risk phrases	Safety phrases
Inhalt	Gefahrstoff	Gefahrstoffsymbol	R-Sätze	S-Sätze
B3	Guanidine hydrochloride 36–50 % <i>Guanidinhydrochlorid 36–50 %</i>	✘ Xn*	R 22-36	S 26-39
BW	Guanidine hydrochloride 36–50 % + isopropanol 20–50 % <i>Guanidinhydrochlorid 36–50 % + Isopropanol 20–50 %</i>	✘ Xn*	R 10-22- 36-67	S 16-26- 39
Proteinase K	Proteinase K, lyophilized <i>Proteinase K, lyophilisiert</i>	✘ Xn	R 36/37/38- 42	S 22-24- 26-36/37

#### Risk phrases

- R 10 Flammable.  
*Entzündlich.*
- R 22 Harmful if swallowed.  
*Gesundheitsschädlich beim Verschlucken.*
- R 36 Irritating to eyes.  
*Reizt die Augen.*
- R 36/37/38 Irritating to eyes, respiratory system, and skin.  
*Reizt die Augen, Atmungsorgane und die Haut.*
- R 42 May cause sensitization by inhalation  
*Sensibilisierung durch Einatmen möglich.*
- R 67 Vapours may cause drowsiness and dizziness.  
*Dämpfe können Schläfrigkeit und Benommenheit verursachen.*

#### Safety phrases

- S 16 Keep away from sources of ignition – No Smoking!  
*Von Zündquellen fernhalten – Nicht rauchen!*
- S 22 Do not breathe dust.  
*Staub nicht einatmen.*
- S 24 Avoid contact with the skin.  
*Berührung mit der Haut vermeiden.*
- S 26 In case of contact with eyes, rinse immediately with plenty of water and seek medical advice.

\* Hazard labeling not necessary if quantity per bottle below 125 g or ml (certificate of exemption according to 67/548/EEC Art. 25, 1999/45/EC Art. 12 and German GefStoffV § 20 (3) and TRGS 200 7.1). For further information see Material Safety Data Sheet.

## Safety phrases

*Bei Berührung mit den Augen gründlich mit Wasser abspülen und Arzt konsultieren.*

- S 36/37 Wear suitable protective clothing and gloves.  
*Bei der Arbeit geeignete Schutzhandschuhe und Schutzkleidung tragen.*
- S 39 Wear suitable eye / face protection.  
*Schutzbrille / Gesichtsschutz tragen.*

## 4.2 GHS classification

Only harmful features do not need to be labeled with H and P phrases up to 125 mL or 125 g.

*Mindergefährliche Eigenschaften müssen bis 125 mL oder 125 g nicht mit H- und P-Sätzen gekennzeichnet werden.*

Component	Hazard contents	GHS symbol	Hazard phrases	Precaution phrases
Inhalt	Gefahrstoff	GHS Symbol	H-Sätze	P-Sätze
B3	Guanidine hydrochloride 36–50 % <i>Guanidinhydrochlorid 36–50 %</i>	 Warning <i>Achtung</i>	302, 319	280, 301+312, 305+351+338, 330, 337+313
BW	Guanidine hydrochloride 36–50 % + isopropanol 20–50 % <i>Guanidinhydrochlorid 36–50 % + Isopropanol 20–50 %</i>	  Warning <i>Achtung</i>	226, 302, 319, 336	210, 233, 280, 301+312, 305+351+338, 330, 337+313, 403+235
Proteinase K	Proteinase K, lyophilized <i>Proteinase K, lyophilisiert</i>	  Danger <i>Gefahr</i>	315, 319, 334, 335	261, 280, 302+352, 304+340, 305+351+338, 312, 332+313, 337+313, 342+311, 403+233

## Hazard phrases

- H 226 Flammable liquid and vapour.  
*Flüssigkeit und Dampf entzündbar.*
- H 302 Harmful if swallowed.  
*Gesundheitsschädlich bei Verschlucken.*
- H 315 Causes skin irritation.  
*Verursacht Hautreizungen.*
- H 319 Causes serious eye irritation.  
*Verursacht schwere Augenreizung.*
- H 334 May cause allergy or asthma symptoms or breathing difficulties if inhaled.  
*Kann bei Einatmen Allergie, asthmaartige Symptome oder Atembeschwerden verursachen.*
- H 335 May cause respiratory irritation.  
*Kann die Atemwege reizen.*
- H 336 May cause drowsiness or dizziness.  
*Kann Schläfrigkeit und Benommenheit verursachen.*

### Precaution phrases

- P 210 Keep away from heat/sparks/open flames/hot surfaces – No smoking.  
*Von Hitze /Funken / offener Flamme / heißen Oberflächen fernhalten. Nicht rauchen.*
- P 233 Keep container tightly closed.  
*Behälter dicht verschlossen halten.*
- P 261 Avoid breathing dust.  
*Einatmen von Staub vermeiden.*
- P 280 Wear protective gloves / eye protection.  
*Schutzhandschuhe / Augenschutz tragen.*
- P 301+312 IF SWALLOWED: Call a POISON CENTER or doctor /physician if you feel unwell.  
*BEI VERSCHLUCKEN: Bei Unwohlsein GIFTINFORMATIONSZENTRUM oder Arzt anrufen.*
- P 302+352 IF ON SKIN: Wash with plenty of soap and water.  
*BEI KONTAKT MIT DER HAUT: Mit viel Wasser und Seife waschen.*
- P 304+340 IF INHALED: Remove victim to fresh air and keep at rest in a position comfortable for breathing.  
*BEI EINATMEN: An die frische Luft bringen und in einer Position ruhigstellen, die das Atmen erleichtert.*
- P 305+351+338 IF IN EYES: Rinse continuously with water for several minutes. Remove contact lenses if present and easy to do – continue rinsing.  
*BEI KONTAKT MIT DEN AUGEN: Einige Minuten lang behutsam mit Wasser spülen. Vorhandene Kontaktlinsen nach Möglichkeit entfernen. Weiter spülen.*
- P 312 Call a POISON CENTER or doctor/physician if you feel unwell.  
*Bei Unwohlsein GIFTINFORMATIONSZENTRUM oder Arzt anrufen.*
- P 330 Rinse mouth.  
*Mund ausspülen.*
- P 332+313 If skin irritation occurs: Get medical advice / attention.  
*Bei Hautreizung: Ärztlichen Rat einholen / ärztliche Hilfe hinzuziehen.*
- P 337+313 Get medical advice / attention.  
*Bei anhaltender Augenreizung: Ärztlichen Rat einholen / ärztliche Hilfe hinzuziehen.*
- P 342+311 If experiencing respiratory symptoms: Call a POISON CENTER or doctor / physician.  
*Bei Symptomen der Atemwege: Giftinformationszentrum oder Arzt anrufen.*
- P 403+233 Store in a well ventilated place. Keep container tightly closed.  
*Behälter dicht geschlossen an einem gut belüfteten Ort aufbewahren.*
- P 403+235 Store in a well ventilated place. Keep cool.  
*Kühl an einem gut belüfteten Ort aufbewahren.*

For further information please see Material Safety Data Sheets ([www.mn-net.com](http://www.mn-net.com)).  
Weiterführende Informationen finden Sie in den Sicherheitsdatenblättern ([www.mn-net.com](http://www.mn-net.com)).

## 5 Standard protocol for human or animal tissue and cultured cells

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
- Set an incubator or water bath to 56 °C.
- Preheat Elution Buffer BE to 70 °C.

### 1 Prepare sample

#### Tissue

Cut **25 mg** human or animal **tissue** into small pieces. Place the sample in a microcentrifuge tube (not provided). **Proceed with step 2.**

*Samples that are difficult to lyse can be ground under liquid nitrogen or may be treated in a mechanical homogenizer (Polytron®, Ultra-Turrax®): Add 25 mg of tissue to a 1.5 mL microcentrifuge tube (not provided), add 50–75 µL phosphate buffered saline (PBS) and homogenize.*

#### Cultured cells

Resuspend up to **10<sup>7</sup> cells** in a final volume of **200 µL Buffer T1**. Add **25 µL Proteinase K** solution and **200 µL Buffer B3**. Incubate the sample at 70 °C for 10–15 min. **Proceed with step 4.**

### 2 Pre-lyse sample

Add **180 µL Buffer T1** and **25 µL Proteinase K** solution. Vortex to mix. Be sure that the samples are completely covered with lysis solution.

*If processing several samples, Proteinase K and Buffer T1 may be premixed directly before use. Do not mix Buffer T1 and Proteinase K more than 10–15 min before addition to the sample: Proteinase K tends to self-digestion in Buffer T1 without substrate.*

**+ 180 µL T1**  
**+ 25 µL**  
**Proteinase K**  
**Mix**

Incubate at **56 °C** until complete lysis is obtained (**at least 1–3 h**). Vortex occasionally during incubation or use a shaking incubator.

*Samples can be incubated overnight as well. If RNA-free DNA is crucial for downstream applications, a RNase digest may be performed: Add 20 µL RNase A (10 mg/mL) solution (not included; see ordering information) and incubate for an additional 5 min at room temperature.*

**56 °C,  
1–3 h**  
  
**or**  
  
**56 °C,  
overnight**

### 3 Lyse sample

Vortex the samples. Add **200 µL Buffer B3**, vortex vigorously and incubate at **70 °C** for **10 min**. Vortex briefly.

*If insoluble particles are visible, centrifuge for 5 min at high speed (e.g., 11,000 x g) and transfer the supernatant to a new microcentrifuge tube (not provided).*

**+ 200 µL B3**  
  
**70 °C,  
10 min**

### 4 Adjust DNA binding conditions

Add **210 µL ethanol (96–100%)** to the sample and vortex vigorously.

*After addition of ethanol a stringy precipitate may become visible. This will not affect the DNA isolation. Be sure to load all of the precipitate on the column in the following step.*

**+ 210 µL  
ethanol**  
  
**Vortex**

### 5 Bind DNA

For each sample, place one **NucleoSpin® Tissue Column** into a Collection Tube. Apply the sample to the column. Centrifuge for **1 min** at **11,000 x g**. Discard the flow-through and place the column back into the Collection Tube.

*If the sample is not drawn completely through the matrix, repeat the centrifugation step at 11,000 x g. Discard flow-through.*

**Load samples**

**11,000 x g,  
1 min**

**6 Wash silica membrane**

**1<sup>st</sup> wash**

Add **500 µL Buffer BW**. Centrifuge for **1 min** at **11,000 x g**. Discard flow-through and place the column back into the Collection Tube.

**+ 500 µL BW**

**11,000 x g,  
1 min**

**2<sup>nd</sup> wash**

Add **600 µL Buffer B5** to the column and centrifuge for **1 min** at **11,000 x g**. Discard flow-through and place the column back into the Collection Tube.

**+ 600 µL B5**

**11,000 x g,  
1 min**

**6 Dry silica membrane**

Centrifuge the column for **1 min** at **11,000 x g**.

Residual ethanol is removed during this step.

**11,000 x g,  
1 min**

**7 Elute highly pure DNA**

Place the NucleoSpin® Tissue Column into a 1.5 mL microcentrifuge tube (not provided) and add **100 µL prewarmed Buffer BE (70 °C)**. Incubate at room temperature for 1 min. Centrifuge **1 min** at **11,000 x g**.

*For alternative elution procedures see section 2.3.*

**+ 100 µL BE  
(70 °C)**

**RT,  
1 min**

**11,000 x g,  
1 min**

## 6 Support protocols

### 6.1 Support protocol for mouse or rat tails

#### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Set an incubator or water bath to 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

#### 1 Prepare sample

Cut **two 0.6 cm-pieces of mouse tail** and place them in a 1.5 mL centrifuge tube (not provided).

*If processing rat tails, one 0.6 cm-piece is sufficient.*

---

#### 2 Pre-lyse sample

Add **180 µL Buffer T1** and **25 µL Proteinase K** and vortex. Incubate at **56 °C overnight** or until complete lysis is obtained. Lysis time can substantially be reduced down to approximately one hour if the tissue is broken up mechanically (e.g., if the tissue is cut into very small pieces before lysis).

Vortex occasionally during incubation or use a shaking water bath. To remove residual bones or hair, centrifuge for **5 min at high speed (e.g., 11,000 x g)**. Transfer **200 µL supernatant** to a new tube.

*If processing several samples, Proteinase K and Buffer T1 may be premixed directly before use. Do never mix Buffer T1 and Proteinase K more than 10–15 min before addition to the sample: Proteinase K tends to self-digestion in Buffer T1 without substrate.*

---

#### 3 Lyse sample

Add **200 µL Buffer B3** to the lysate and vortex vigorously.

*Buffer B3 and ethanol (see step 4) can be premixed before addition to the lysate.*

---

#### 4 Adjust DNA binding conditions

Add **210 µL ethanol** to the lysate and vortex vigorously.

---

Proceed with step 5 of the standard protocol (see section 5).

---

## 6.2 Support protocol for bacteria

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Set an incubator or water bath to 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1 Prepare sample

Up to 1 mL of bacterial culture can be used for the preparation depending on, for example, density of culture, culture medium, and bacterial strain.

Centrifuge up to **1 mL culture** for **5 min** at **8,000 x g**. Remove supernatant.

---

### 2 Pre-lyse sample

Resuspend the pellet in **180 µL Buffer T1** by pipetting up and down. Add **25 µL Proteinase K**. Vortex vigorously and incubate at 56 °C until complete lysis is obtained (at least 1–3 h). Vortex occasionally during incubation or use a shaking incubator.

*Samples can be incubated overnight as well.*

*If RNA-free DNA is crucial for downstream applications, an RNase digest may be performed: Add 20 µL RNase A (20 mg/mL) solution (not included; see ordering information) and incubate for an additional 5 min at room temperature.*

**Hard-to-lyse bacteria:** *Some strains, especially Gram-positive bacteria, are more difficult to lyse. In such cases, a preincubation with a lytic enzyme is necessary: Resuspend the pelleted cells in 20 mM Tris/HCl; 2 mM EDTA; 1% Triton X-100; pH 8 (instead of Buffer T1) supplemented with 20 mg/mL lysozyme or 0.2 mg/mL lysostaphin and incubate for 30–60 min at 37 °C. Add 25 µL Proteinase K, incubate at 56 °C until complete lysis is obtained.*

---

Proceed with step 3 of the standard protocol (see section 5).

## 6.3 Support protocol for yeast

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Check that sorbitol buffer and lyticase or zymolase (not provided with the kit) is available for sample pre-lysis.
  - Set an incubator or water bath to 30 °C and 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1 Prepare sample

Harvest **3 mL YPD yeast culture** ( $OD_{600} \leq 10$ ) by centrifugation for **10 min** at **5,000 x g**. Wash the cells once with **1 mL 10 mM EDTA, pH 8**. Remove the supernatant and pellet the cells by centrifugation (**5,000 x g, 10 min**).

---

### 2 Pre-lyse sample

Resuspend the pellet in **600 µL sorbitol buffer** (1.2 M sorbitol; 10 mM CaCl<sub>2</sub>; 0.1 M Tris/HCl pH 7.5; 35 mM β-mercaptoethanol). Add **50 U lyticase or zymolase\***. Incubate at **30 °C** for **30 min**. This step degrades the yeast cell wall creating spheroplasts. Spheroplast formation may be checked microscopically. Centrifuge the mixture for **10 min** at **2,000 x g** remove supernatant and resuspend the pelleted spheroplasts in **180 µL Buffer T1**. Add **25 µL Proteinase K** solution and vortex vigorously. Incubate at **56 °C** until complete lysis is obtained (at least 1–3 h). Vortex occasionally during incubation or use a shaking water bath.

*Samples can be incubated overnight as well.*

*If RNA-free DNA is crucial for downstream applications, an RNase digest may be performed: Add 20 µL RNase A (20 mg/mL) solution (not included; see ordering information) and incubate for an additional 5 min at room temperature.*

---

Proceed with step 3 of the standard protocol (see section 5).

---

\* Other protocols use 5–200 U lyticase or zymolase depending on enzyme quality or brand. Increasing the enzyme concentration may be required if spheroplasts are not formed.

---

## 6.4 Support protocol for dried blood spots (e.g., NucleoCards, FTA® cards, Guthrie cards)

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Set an incubator or water bath to 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1 Prepare sample

Cut out one or two **dried blood spots** as accurately as possible. Cut spots into small pieces and place them in a 1.5 mL microcentrifuge tube (not provided).

*The area of the dried blood spots should be between 15 and 30 mm<sup>2</sup>.*

---

### 2 Pre-lyse sample

Add **180 µL Buffer T1** and mix by vortexing. Place the samples in a water bath or heating block and heat for **10 min** at **94 °C**. Let the sample cool down. Add **25 µL Proteinase K** solution. Spin the samples briefly, vortex and incubate at **56 °C** for **1 h**. Vortex occasionally during incubation or use a shaking water bath.

Make sure that the samples are completely covered with lysis buffer during incubation.

---

### 3 Lyse sample

Add **200 µL Buffer B3**, vortex vigorously to mix and incubate at **56 °C** for **10 min**.

---

Proceed with step 4 of the standard protocol (see section 5).

## 6.5 Support protocol for genomic DNA and viral DNA from blood samples

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1-2 Prepare sample / Pre-lyse sample

Not necessary

---

### 3 Lyse blood sample

Pipette **25 µL Proteinase K** and up to **200 µL blood**, buffy coat, or body fluid sample (equilibrated to room temperature) into 1.5 mL microcentrifuge tubes (not provided).

*For sample volumes less than 200 µL, add PBS to adjust the volume to 200 µL. If purifying DNA viruses, we recommend starting with 200 µL serum or plasma. If cultured cells are used, resuspend up to  $5 \times 10^6$  cells in a final volume of 200 µL PBS.*

Add **200 µL Buffer B3** to the samples and vortex the mixture vigorously (10–20 s).

Incubate samples at **room temperature** for **5 min**. Mix.

Incubate samples at **70 °C** for **10–15 min**.

*The lysate should become brownish during incubation with Buffer B3. Increase incubation time with Proteinase K (up to 30 min) and vortex once or twice vigorously during incubation if processing older or clotted blood samples.*

---

### 4 Adjust DNA binding conditions

Add **210 µL ethanol (96–100 %)** to each sample and vortex again.

---

### 5 Bind DNA

For each preparation, take one **NucleoSpin® Tissue Column** placed in a Collection Tube and load the sample. Centrifuge **1 min** at **11,000 x g**. If the samples are not drawn through the matrix completely, repeat the centrifugation at higher g-force (<15,000 x g). Discard Collection Tube with flow-through.

---

Proceed with step 6 (Wash silica membrane) of the standard protocol (see section 5).

---

## 6.6 Support protocol for hair roots

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Set an incubator or water bath to 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1 Prepare sample

Cut off the hair roots from the hair sample (up to 100) and collect them in a 1.5 mL microcentrifuge tube (not provided).

---

### 2 Pre-lyse sample

Add **180 µL Buffer T1** to the hair roots and freeze the samples in liquid nitrogen. Thaw samples in a **56 °C water bath**. Repeat this procedure 4 times. Add 25 µL Proteinase K solution, mix by vortexing, and incubate **6–8 h** or **overnight** at **56 °C**. Use a shaking water bath or vortex occasionally.

---

Proceed with step 3 of the standard protocol (see section 5).

## 6.7 Support protocol for paraffin-embedded tissue

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Check if xylene or n-octane is available.
  - Set an incubator or water bath to 37 °C and 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1 Prepare sample

Prepare small sections (up to 25 mg) from blocks of fixed, embedded tissue. If possible, trim excess paraffin from the block before slicing. Handle the sections with tweezers or toothpicks and place the samples into microcentrifuge tubes.

Add **1 mL n-octane or xylene** to each tube. Vortex vigorously and incubate at room temperature for about 30 min. Vortex occasionally.

Centrifuge at **11,000 x g** for **3 min**. Pipette off supernatant.

Add **1 mL ethanol (96–100%)** to each tube. Close and mix by inverting several times. Centrifuge at **11,000 x g** for **3 min**. Pipette off supernatant.

Repeat the ethanol washing step. Pipette off as much of the ethanol as possible.

Incubate the open tube at **37 °C** until the ethanol has evaporated (**~15 min**).

---

Proceed with step 2 of the standard protocol (see section 5).

## 6.8 Support protocol for genomic DNA from stool

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Check if TE buffer is available.
  - Set an incubator or water bath to 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1 Prepare sample

Add **250 mg feces** to **1 mL TE buffer** (10 mM Tris/Cl; 1 mM EDTA, pH 8). Resuspend the sample by vigorous vortexing (**30 s**).

Centrifuge the sample for **15 min** at **4,000 x g**. Discard supernatant.

Resuspend the pellet in **0.2–1 mL Buffer T1**. Use as much buffer as necessary for good resuspension of the sample.

*The prepared pellet contains, among other constituents, cells from the digestive tract and bacteria.*

Transfer **200 µL** of the **resuspended sample** to a new microcentrifuge tube.

---

Proceed with the addition of 25 µL Proteinase K in step 2 of the standard protocol (see section 5).

*Human cells, bacterial cells, and cells of pathogens in the stool lyse during the incubation step at 56 °C with Proteinase K with different efficiency. For the detection of cells that are difficult to lyse (e.g., some bacteria and parasites) it can be beneficial to perform an additional incubation at increased incubation temperature (up to 95 °C; 5–10 min). DNA yield will often be higher with such an additional incubation step at high temperature. However, note that the ratio of human to non-human DNA will typically change due to the increased release of bacterial/pathogen DNA.*

## 6.9 Support protocol for viral DNA (e.g., CMV) from stool

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Prepare 0.9 % NaCl.
  - Set an incubator or water bath to 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1 Prepare sample

Suspend the stool sample in **0.9% NaCl** (ca. 0.5 g in max. 4 mL).

**Centrifuge** aliquots of the stool sample for **5 min** at **800 x g** at **RT** (e.g., 4 mL: 4 x 1 mL in a 1.5 mL microcentrifuge tube). Carefully reunite supernatant (do not touch the pellet).

Filtrate supernatant through 0.22–0.45 µm sterile filter. Fractionate the filtrate and centrifuge for **1 min** at **11,000 x g**.

---

### 2 Pre-lyse sample

Carefully remove the supernatant by decanting. Add **400 µL Buffer T1** and **35 µL Proteinase K** and mix by vortexing.

---

### 3 Lyse sample

Add **400 µL Buffer B3** and mix by vortexing. Incubate for at least **30 min** at **70 °C**.

---

### 4 Adjust DNA binding conditions

Add **420 µL ethanol (96–100%)** and mix by vortexing.

---

### 5 Bind DNA

For each sample, place one **NucleoSpin® Tissue Column** into a Collection Tube. Load the NucleoSpin® Tissue Column successively. Centrifuge for **1 min** at **4,500 x g**. Discard the flow-through and place the column back into the Collection Tube.

*If the sample is not drawn completely through the matrix, repeat the centrifugation step at 11,000 x g. Discard flow-through.*

---

## 6 Wash silica membrane

### 1<sup>st</sup> wash

Add **600 µL Buffer BW**. Centrifuge for **1 min** at **4,500 x g**. Discard flow-through and place the column back into the Collection Tube.

### 2<sup>nd</sup> wash

Add **600 µL Buffer B5** to the column and centrifuge for **1 min** at **4,500 x g**. Discard flow-through and place the column back into the Collection Tube.

### 3<sup>rd</sup> wash

Add **600 µL Buffer B5** to the column and centrifuge for **2 min** at **11,000 x g**. Discard flow-through.

---

## 7 Dry silica membrane

Place the NucleoSpin® Tissue Column into a new Collection Tube and incubate with open lid for **1–2 min** at **70 °C**.

Residual ethanol is removed during this step.

---

## 8 Elute highly pure DNA

Place the NucleoSpin® Tissue Column into a 1.5 mL microcentrifuge tube (not provided) and add **100 µL prewarmed Buffer BE (70 °C)**. Incubate with closed lid for **3–5 min** at **70 °C**. Centrifuge for **1 min** at **4,500 x g**.

*For alternative elution procedures see section 2.3.*

---

Use 10 µL DNA extract for a 20 µL PCR reaction mix.

Add inhibition control mix (10 µL DNA extract with human DNA) and amplify with for example actin-/β-globin-/ or other human specific primer.

---

## 6.10 Support protocol for detection of *Mycobacterium tuberculosis* or *Legionella pneumophila* in sputum or bronchoalveolar lavage

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Set an incubator or water bath to 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
  - Prepare N-acetyl cystein/NaOH (2 g NaOH; 1.45 g sodium citrate; 0.5 g N-acetyl cystein. Add water to 100 mL).
- 

### 1 Prepare sample

Add **200–500 µL sputum** or bronchoalveolar lavage to an **equal volume N-acetyl cystein / NaOH**. Vortex gently to mix.

Incubate the mixture for **25 min** at **room temperature** with shaking.

Adjust the **volume to 25 mL** with **sterile water**.

Centrifuge for **30 min** at **4,000 x g**. Discard the supernatant.

Resuspend the pellet in **0.5–1 mL Buffer T1** (depending on sample viscosity).

Transfer **200 µL of the resuspended sample** to a new microcentrifuge tube (not provided).

---

Proceed with step 2 of the standard protocol, see section 5 (addition of Proteinase K and incubation).

## 6.11 Support protocol for detection of EHEC bacteria in food (e.g., fresh cows' milk)

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Prepare mTSB and 3.2 M sodium acetate.
  - Set an incubator or water bath to 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1 Prepare sample

To a sterile 1 liter flask, add **25 mL milk** and **225 mL prewarmed (37 °C) mTSB medium** (supplied with Novobiocin). Incubate the mixture in a shaking water bath for **5–6 h** or overnight at **37 °C**.

*Preparation of mTSB medium: 30 g Tryptic Soy Broth (Gibco), 1.5 g bile salts No. 3 (Oxoid), 1.5 g KH<sub>2</sub>PO<sub>4</sub>. Add 900 mL H<sub>2</sub>O. Filter the medium and adjust the pH with 2 M NaOH to 7.4. Add water to 1 liter and autoclave for 15 min at 121 °C.*

Centrifuge **100 mL culture** for **40 min** at **6,000 x g**.

Gently pour off the supernatant and resuspend the pellet in 2 mL sterile water. Centrifuge for **10 min** at **10,000 x g**.

---

### 2 Pre-lyse sample

Resuspend the pellet in **180 µL Buffer T1** and add **25 µL Proteinase K** solution.

---

Carry out the standard protocol, beginning with step 3 (see section 5).

---

After elution of the DNA, proceed with the following step.

Precipitate the DNA by adding **20 µL 3.2 M sodium acetate** and **400 µL ethanol** to **200 µL eluate**. Centrifuge for **30 min** at **11,000 x g**. Discard supernatant and wash the pellet with **1 mL 70 % ethanol** and resuspend in **10 µL sterile water**.

---

## 6.12 Support protocol for purification of bacterial DNA (e.g., *Chlamydia trachomatis*) from cultures, biological fluids, or clinical specimens

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Set an incubator or water bath to 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1 Prepare sample

- Isolation of bacterial DNA from **bacterial cultures or biological fluids**: Pellet bacteria by centrifugation for **5 min** at **13,000 x g** and proceed with step 2 of the standard protocol, see section 5.
  - Isolation of bacterial DNA from **eye, nasal or pharyngeal swabs**: Collect samples, add 2 mL PBS containing a common fungicide, and incubate for **several hours** at **room temperature**. Pellet bacteria by centrifugation for **5 min** at **13,000 x g**. Discard supernatant.
- 

Proceed with step 2 of the standard protocol (see section 5).

## 6.13 Support protocol for purification of bacterial DNA (e.g., *Borrelia burgdorferi*) from urine

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Set an incubator or water bath to 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1 Prepare sample

Centrifuge **1 mL urine** sample at **13,000 x g** for **30 min**. Discard supernatant, add again **1 mL urine** sample to the pellet and centrifuge at **13,000 x g** for **30 min**. This step a can be repeated up to three times.

*The sample material should be fresh and stored at -20 °C to -80 °C is only recommended for a couple of days. After thawing incubate the sample at 40 °C as long as all precipitates are dissolved. Urine tends to form precipitates when stored at low temperatures.*

---

Proceed with step 2 of the standard protocol (see section 5).

## 6.14 Support protocol for purification of viral DNA (e.g., CMV) from urine

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Set an incubator or water bath to 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1 Prepare sample

Centrifuge aliquots of the urine sample for **10 min** at **full speed** (e.g., 4 mL: 4 x 1 mL in a 1.5 mL microcentrifuge tube). Carefully decant supernatant.

*If frozen urine samples are used precipitates may appear after defrosting, which must be dissolved before the centrifugation step. This can be done through a 30 min incubation step at 37–40 °C. If a complete solution does not happen let the precipitate sediment and proceed with step 1 of the support protocol using only the supernatant.*

---

### 2 Pre-lyse sample

Resuspend the pellet in **180 µL Buffer T1** and **25 µL Proteinase K**.

Resuspend the first pellet in 180 µL Buffer T1 and 25 µL Proteinase K. Transfer the resuspended solution of the first tube to the second tube and the resuspended solution of the second tube to the third tube and so on. Finally continue with step 3.

---

### 3 Lyse sample

Add **200 µL Buffer B3**, vortex and incubate at least for **20 min** at **70 °C**.

---

### 4 Adjust DNA binding conditions

Add **210 µL ethanol (96–100%)** to the sample and vortex vigorously.

---

### 5 Bind DNA

For each sample, place one **NucleoSpin® Tissue Column** into a Collection Tube. Apply the sample to the column. Centrifuge for **1 min** at **4,500 x g**. Discard the flow-through and place the column back into the Collection Tube.

---

## 6 Wash silica membrane

### **1<sup>st</sup> wash**

Add **500 µL Buffer BW**. Centrifuge for **1 min** at **4,500 x g**. Discard flow-through and place the column back into the Collection Tube.

### **2<sup>nd</sup> wash**

Add **600 µL Buffer B5** to the column and centrifuge for **2 min** at **11,000 x g**. Discard flow-through and place the column back into the Collection Tube.

---

## 7 Dry silica membrane

Incubate with open lid for **1–2 min** at **70 °C**.

Residual ethanol is removed during this step.

---

## 8 Elute highly pure DNA

Add **70 µL prewarmed Buffer BE (70 °C)**, close the lid and incubate for further **3–5 min** at **70 °C**. Centrifuge for **1 min** at **4,500 x g**.

---

## 6.15 Support protocol for purification of genomic DNA from insects

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Set an incubator or water bath to 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1 Prepare sample

Homogenize not **more than 50 mg insects** under liquid nitrogen and transfer the powder into a 1.5 mL microcentrifuge tube (not provided).

---

Proceed with step 2 of the standard protocol (see section 5) with addition of Proteinase K.

## 6.16 Support protocol for purification of genomic DNA from dental swabs

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Set an incubator or water bath to 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1 Prepare sample

Place swab material (paper, cotton, brushes, plastic) in a 1.5 mL microcentrifuge tube (not provided).

---

### 2 Pre-lyse sample

Add **180 µL Buffer T1** and **25 µL Proteinase K** to each sample. Close the microcentrifuge tube and spin briefly for **15 s** at **1,500 x g** in order to get the swab material completely submerged. Incubate at room temperature for **5 min**. Vortex the tube vigorously for **15 s** and spin briefly for **15 s** at **1,500 x g**.

Incubate the tubes at **70 °C** in an incubator for **10 min**. Place a weight on top of the tube in order to prevent the caps from popping off. Shift the temperature to **95 °C** for **5 min**. Spin briefly for **15 s** at **1,500 x g** to collect any sample from the lids. Open the microcentrifuge tubes.

*Skip incubation at 95 °C, depending on the detecting bacterial strain.*

---

### 2a Separate lysis solution from dental swabs

#### Alternative A:

Place a **NucleoSpin® Filter** (not provided; see ordering information) into a Collection Tube (2 mL). Transfer the swab tip (cut off swab shaft) and the remaining solution onto the NucleoSpin® Filter. Centrifuge for **1 min** at **11,000 x g**. Discard the NucleoSpin® Filter. Continue with flow-through.

#### Alternative B:

Transfer as much as possible of the lysate solution to a 1.5 mL microcentrifuge tube (not provided). Discard swab and continue with recovered solution.

---

Proceed with step 3 of the standard protocol (see section 5).

## 6.17 Support protocol for purification of genomic DNA from buccal swabs

### Before starting the preparation:

- Check if Buffer B5 and Proteinase K were prepared according to section 3.
  - Check if PBS is available.
  - Set an incubator or water bath to 56 °C.
  - Before elution, preheat Elution Buffer BE to 70 °C.
- 

### 1 Prepare sample

Collect the samples with cotton, dacron® (Daigger), or C.E.P. swabs (Gibco BRL). Scrape firmly against the inside of each cheek several times and let the swabs air dry.

*The respective individual should not have consumed food or drink within 30 min before collection of the sample.*

---

### 2 Pre-lyse sample

Place the dry swab material in 2 mL microcentrifuge tubes (not provided). Add **400–600 µL PBS** and **25 µL Proteinase K** solution to the swabs.

The volume of PBS is depending on the type of swab used: for cotton and dacron swabs, 400 µL are sufficient; for C.E.P. swabs, 600 µL are necessary.

Mix by vortexing 2 x 5 s and incubate **10 min** at **56 °C**.

---

### 2a Separate lysis solution from buccal swabs

#### **Alternative A:**

Place a **NucleoSpin® Filter** (not provided; see ordering information) into a Collection Tube (2 mL). Transfer the swab tip (cut off swab shaft) and the remaining solution onto the NucleoSpin® Filter. Centrifuge for **1 min** at **11,000 x g**. Discard the NucleoSpin® Filter. Continue with flow-through.

#### **Alternative B:**

Transfer as much as possible of the lysate solution to a 1.5 mL microcentrifuge tube (not provided). Discard swab and continue with recovered solution.

---

### 3 Lyse sample

Add **one volume Buffer B3** (400 or 600 µL; depending on the swab type /volume of PBS buffer used) and vortex vigorously. Incubate the samples at **70 °C** for **10 min**.

*Note: Depending on the number of preparations, additional Buffer B3 might be needed (see ordering information).*

---

### 4 Adjust DNA binding conditions

Add **one volume 96–100% ethanol** (400 or 600 µL, depending on the swab type) to each sample and mix by vortexing.

---

### 5 Bind DNA

Transfer **600 µL of the samples** from the 2 mL microcentrifuge tubes into **NucleoSpin® Tissue Columns**. Centrifuge at **11,000 x g** for **1 min**. If the samples are not drawn through completely, repeat the centrifugation. Discard flow-through.

Place the columns back into the Collection Tubes and repeat step 5 once or twice, depending on the lysis volume.

---

When all of the lysate has been applied to the columns, proceed with step 6 of the standard protocol (section 5).

---

## 7 Appendix

### 7.1 Troubleshooting

Problem	Possible cause and suggestions
No or poor DNA yield	<i>Incomplete lysis</i>
	<ul style="list-style-type: none"> <li>• Sample not thoroughly homogenized and mixed with Buffer T1/ Proteinase K. The mixture has to be vortexed vigorously immediately after the addition of Buffer T1.</li> <li>• Decreased Proteinase K activity: Store dissolved Proteinase K at -20 °C for 6 months.</li> </ul>
	<i>Reagents not applied properly</i>
	<ul style="list-style-type: none"> <li>• Prepare Buffer B5 and Proteinase K solution according to instructions (see section 3). Add ethanol to the lysates before loading them onto the columns.</li> </ul>
	<i>Suboptimal elution of DNA from the column</i>
	<ul style="list-style-type: none"> <li>• Preheat Buffer BE to 70 °C before elution. Apply Buffer BE directly onto the center of the silica membrane.</li> <li>• Elution efficiencies decrease dramatically, if elution is done with buffers with a pH &lt; 7.0. Use slightly alkaline elution buffers like Buffer BE (pH 8.5).</li> <li>• Especially when expecting high yields from large amounts of material, we recommend elution with 200 µL Buffer BE and incubation of the closed columns in an incubator at 70 °C for 5 min before centrifugation.</li> </ul>
Poor DNA quality	<i>Incomplete lysis</i>
	<ul style="list-style-type: none"> <li>• Sample not thoroughly homogenized and mixed with Buffer T1/ Proteinase K. The mixture has to be vortexed vigorously immediately after the addition of Buffer T1.</li> <li>• Decreased Proteinase K activity: Store dissolved Proteinase K at -20 °C for 6 months.</li> </ul>

- Poor DNA quality  
(continued)
- Reagents not applied properly*
- Prepare Buffer B5 and Proteinase K solution according to instructions (see section 3). Add ethanol to the lysates before loading them on the columns.
- RNA in sample*
- If RNA-free DNA is desired, add 20 µL of RNase A solution (10 mg/mL; not supplied with the kit) before addition of Buffer B3 and incubate at 37 °C for 5 min.
- 

- Clogged columns
- Too much sample material used*
- Do not use more sample material than recommended (25 mg for most tissue types). If insoluble material like bones or hair remains in the lysate, spin down the debris and transfer the clear supernatant to a new microcentrifuge tube before proceeding with addition of Buffer B3 and ethanol. The use of the NucleoSpin® Filter prior column loading prevents column clogging.
- Incomplete lysis*
- Sample not thoroughly homogenized and mixed with Buffer T1/Proteinase K. The mixture has to be vortexed vigorously immediately after the addition of Buffer T1.
  - Decreased Proteinase K activity: Store dissolved Proteinase K at -20 °C for 6 months.
- 

- Suboptimal performance of genomic DNA in enzymatic reactions
- Reagents not applied properly*
- Prepare Buffer B5 and Proteinase K solution according to instructions (see section 3). Add ethanol to the lysates before loading them on the columns.
- Carry-over of ethanol or salt*
- Make sure to centrifuge  $\geq 1$  min at 11,000 x *g* in order to remove all of ethanolic Buffer 5 before eluting the DNA. If, for any reason, the level of Buffer B5 has reached the column outlet after drying, repeat the centrifugation.
  - Do not chill Buffer B5 before use. Cold buffer will not remove salt effectively. Equilibrate Buffer B5 to room temperature before use.
-

Suboptimal performance of genomic DNA in enzymatic reactions (continued)	<i>Contamination of DNA with inhibitory substances</i>	
	<ul style="list-style-type: none"> <li>Do not elute DNA with TE buffer. EDTA may inhibit enzymatic reactions. Repurify DNA and elute in Buffer BE.</li> <li>If the <math>A_{260}/A_{280}</math> ratio of the eluate is below 1.6, repeat the purification procedure: Add 1 volume Buffer B3 plus 1 volume ethanol (96–100%) to the eluate. Load the mixture onto a NucleoSpin® Tissue Column and proceed with step 5 of the standard protocol (see section 5).</li> </ul>

### 7.3 Product use restriction/warranty

**NucleoSpin® Tissue** kit components are intended, developed, designed, and sold FOR RESEARCH PURPOSES ONLY, except, however, any other function of the product being expressly described in original MACHEREY-NAGEL product leaflets.

MACHEREY-NAGEL products are intended for GENERAL LABORATORY USE ONLY! MACHEREY-NAGEL products are suited for QUALIFIED PERSONNEL ONLY! MACHEREY-NAGEL products shall in any event only be used wearing adequate PROTECTIVE CLOTHING. For detailed information please refer to the respective Material Safety Data Sheet of the product! MACHEREY-NAGEL products shall exclusively be used in an ADEQUATE TEST ENVIRONMENT. MACHEREY-NAGEL does not assume any responsibility for damages due to improper application of our products in other fields of application. Application on the human body is STRICTLY FORBIDDEN. The respective user is liable for any and all damages resulting from such application.

DNA/RNA/PROTEIN purification products of MACHEREY-NAGEL are suitable for **IN VITRO-USES ONLY!**

ONLY MACHEREY-NAGEL products specially labeled as IVD are also suitable for **IN VITRO**-diagnostic use. Please pay attention to the package of the product. **IN VITRO**-diagnostic products are expressly marked as IVD on the packaging.

**IF THERE IS NO IVD SIGN, THE PRODUCT SHALL NOT BE SUITABLE FOR IN VITRO-DIAGNOSTIC USE!**

**ALL OTHER PRODUCTS NOT LABELED AS IVD ARE NOT SUITED FOR ANY CLINICAL USE (INCLUDING, BUT NOT LIMITED TO DIAGNOSTIC, THERAPEUTIC AND/OR PROGNOSTIC USE).**

No claim or representations is intended for its use to identify any specific organism or for clinical use (included, but not limited to diagnostic, prognostic, therapeutic, or blood banking). It is rather in the responsibility of the user or - in any case of resale of the products - in the responsibility of the reseller to inspect and assure the use of the DNA/RNA/protein purification products of MACHEREY-NAGEL for a well-defined and specific application.

MACHEREY-NAGEL shall only be responsible for the product specifications and the performance range of MN products according to the specifications of in-house quality control, product documentation and marketing material.

This MACHEREY-NAGEL product is shipped with documentation stating specifications and other technical information. MACHEREY-NAGEL warrants to meet the stated specifications. MACHEREY-NAGEL's sole obligation and the customer's sole remedy is limited to replacement of products free of charge in the event products fail to perform as warranted. Supplementary reference is made to the general business terms and conditions of MACHEREY-NAGEL, which are printed on the price list. Please contact us if you wish to get an extra copy.

There is no warranty for and MACHEREY-NAGEL is not liable for damages or defects arising in shipping and handling (transport insurance for customers excluded), or out of accident or improper or abnormal use of this product; defects in products or

components not manufactured by MACHEREY-NAGEL, or damages resulting from such non-MACHEREY-NAGEL components or products.

MACHEREY-NAGEL makes no other warranty of any kind whatsoever, and SPECIFICALLY DISCLAIMS AND EXCLUDES ALL OTHER WARRANTIES OF ANY KIND OR NATURE WHATSOEVER, DIRECTLY OR INDIRECTLY, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, AS TO THE SUITABILITY, REPRODUCTIVITY, DURABILITY, FITNESS FOR A PARTICULAR PURPOSE OR USE, MERCHANTABILITY, CONDITION, OR ANY OTHER MATTER WITH RESPECT TO MACHEREY-NAGEL PRODUCTS.

In no event shall MACHEREY-NAGEL be liable for claims for any other damages, whether direct, indirect, incidental, compensatory, foreseeable, consequential, or special (including but not limited to loss of use, revenue or profit), whether based upon warranty, contract, tort (including negligence) or strict liability arising in connection with the sale or the failure of MACHEREY-NAGEL products to perform in accordance with the stated specifications. This warranty is exclusive and MACHEREY-NAGEL makes no other warranty expressed or implied.

The warranty provided herein and the data, specifications and descriptions of this MACHEREY-NAGEL product appearing in MACHEREY-NAGEL published catalogues and product literature are MACHEREY-NAGEL's sole representations concerning the product and warranty. No other statements or representations, written or oral, by MACHEREY-NAGEL's employees, agent or representatives, except written statements signed by a duly authorized officer of MACHEREY-NAGEL are authorized; they should not be relied upon by the customer and are not a part of the contract of sale or of this warranty.

Product claims are subject to change. Therefore please contact our Technical Service Team for the most up-to-date information on MACHEREY-NAGEL products. You may also contact your local distributor for general scientific information. Applications mentioned in MACHEREY-NAGEL literature are provided for informational purposes only. MACHEREY-NAGEL does not warrant that all applications have been tested in MACHEREY-NAGEL laboratories using MACHEREY-NAGEL products. MACHEREY-NAGEL does not warrant the correctness of any of those applications.
